Did North Korea reroute power to keep Pyongyang connected 24 hours a day?

(Reuters) People living in North Korea's rural areas have been forced to stumble in the dark without electricity after authorities re-routed power to keep the capital Pyongyang connected 24 hours a day, sources in the country told RFA.

Does Pyongyang have electricity?

Last month, however, Pyongyang began supplying electricity to homes around the clock, according to sources. But the newfound abundance of power in Pyongyang has come at the expense of the people in the provinces, who must now endure long stretches without electricity.

Why are Pyongyang's residential areas getting continuous power?

RFA reported May 31 that Pyongyang residents were concerned that the city's residential areas were getting continuous power only because the city's factories and businesses were closed due to poor economic conditions.

Why is Pyongyang rerouting all power to the capital?

Now as Pyongyang is trying to deliver on Kim Jong Un's recent promise to alleviate the city's housing shortage with 50,000 new homes by 2025, including 10,000 by the end of this year, the central government is rerouting all power across the country to the capital so that construction can continue around the clock, the official said.

That's where smart energy storage jumps in - think of it as a giant "power bank" for an entire city. In this article, we'll unpack how these systems work, why they're gaining ...

On top of bringing a power adapter/power converter to Korea, I highly recommend that you bring a power bank as well. It's not uncommon to run out of battery quickly especially ...
