As the UK intensifies its focus on decarbonising the electricity system, timely grid access for battery storage will be essential to support renewable energy integration, grid ...

As the UK intensifies its focus on decarbonising the electricity system, timely grid access for battery storage will be essential to support ...

Having substantial grid-scale energy storage could help stabilise electricity prices, which might give households lower and less ...

Renewable energy project approvals hit record high in GB in 2025, data shows Applications to build battery storage drive boom as offshore wind projects given go-ahead ...

This post investigates the state of the UK battery storage pipeline, year-to-date figures and an insight into the appetite to develop ...

According to Wood Mackenzie, the UK is expected to lead Europe's large-scale energy storage installations, reaching 25.68 GWh by 2031, with substantial growth anticipated ...

There is significant potential for hydrogen storage in salt caverns. The hydrogen storage required would be equivalent to 9 days of average demand. The increasing ...

This post investigates the state of the UK battery storage pipeline, year-to-date figures and an insight into the appetite to develop over time. Battery storage is essential for ...

Green energy storage is essential for the UK to fully replace fossil fuel power plants. Wind and solar have become a complication for grid operators who need to re-balance their intermittent ...

The UK's journey to net zero will be impossible without large-scale energy storage. As renewables like wind and solar become dominant sources of electricity, storing excess power and ...

Green energy storage is essential for the UK to fully replace fossil fuel power plants. Wind and solar have become a complication for grid operators ...

A new era for renewable power and energy security begins today (Tuesday 8 April) as Ofgem launches a new cap and floor investment support scheme, unlocking billions in ...

Having substantial grid-scale energy storage could help stabilise electricity prices, which might give households lower and less volatile bills. It would also reduce the need to fire ...

The UK's journey to net zero will be impossible without large-scale energy storage. As renewables like wind and solar become dominant sources of ...

Storage of heat at a household level has been common in the UK, but is also reducing. Many British homes have traditionally had hot water tanks, and a significant proportion have used ...
