-----

The fundamental way to protect against electromagnetic threats is to use established engineering principles, whether EMP or EMI, to exclude harmful energy from vulnerable systems while ...

The use of a barrier protection ensures that the equipment housed within the enclosure is subjected to minimal EM levels that do not hamper its survival or operation. Similar techniques ...

The important thing to know is that you can test how effectively a container shields electromagnetic frequencies by using an AM/FM radio or an HT or Walkie Talkie.

Use RF Gasket to enhance protection if needed. Pad interior with insulative material or container to keep electronics from contacting metal surfaces on interior of container.

Below is a list of 35 electronic items you should consider safeguarding in a Faraday-protected shipping container to ensure you are well-prepared and resilient in the face ...

Our unique expertise in filter technologies enables us to provide a comprehensive portfolio of electromagnetic environmental effect (E3) hardening solutions including custom designs to fit ...

A properly designed barrier with penetration protection for all power, data and antenna cables will make equipment behind it safe from wide variations of external EM fields, including HEMP, ...

o To conduct Department of Defense information networks (DODIN) operations for the joint warfighter to enable lethality across all warfighting domains in defense of our Nation. o Deliver ...
