---

BIG has grown organically over the last two decades from a founder, to a family, to a force of 700. Our latest transformation is the BIG LEAP: Bjarke Ingels Group of Landscape, Engineering, ...

Shaped by the movement of the water, the surrounding park is designed by BIG Landscape and manages storm surges through sloping terraces, vegetated dunes, and wetland gardens that ...

Several critical elements decide the appropriate distance between solar panels. First and foremost, environmental factors such as ...

Developed by Tishman Speyer and built by Turner, the commercial high-rise was designed by BIG in collaboration with Adamson Associates and structural engineer WSP Cantor Seinuk. ...

Our latest transformation is the BIG LEAP: Bjarke Ingels Group of Landscape, Engineering, Architecture, Planning and Products. A plethora of in-house perspectives allows us to see ...

The gap between the last row of solar panels and the roof's edge should be a minimum of 12 inches or one foot. This ensures the panels are accommodated as they expand ...

Throughout the building, warm wood cladding and concrete floors are accented with the school's signature colors of red and gold. The BIG-designed interiors are designed to accommodate ...

There should be something like 4 to 7 inches of space between each row of solar panels, as the casing contracts and extends with the climate. This will help to ensure optimal ...

The gap between the last row of solar panels and the roof's edge should be a minimum of 12 inches or one foot. This ensures the ...

Using this calculator, you can determine the ideal distance between rows based on your location, panel tilt, height, and seasonal sun position, ensuring your solar array performs at its best all ...

BIG's aim was to amplify Treehotel's focus on sustainability and natural tourism, and create a resilient design in a region with strong seasonal climatic contrasts.

Generally, leaving a gap of approximately 0.5 times the width of a solar module between panels is a good starting point for efficient airflow and ...

When designing a solar power system, one of the most overlooked but critical aspects is the distance between solar panels. While it may seem like a minor detail, proper ...

Generally, leaving a gap of approximately 0.5 times the width of a solar module between panels is a good starting point for efficient airflow and optimal performance.

Freedom Plaza will extend BIG's contribution to New York City's waterfront, alongside adjacent coastal projects that include the East Side Coastal Resiliency project, the Battery Park City ...

Several critical elements decide the appropriate distance between solar panels. First and foremost, environmental factors such as climate, latitude, and annual sun paths are ...
