What is a container energy storage system?

Container energy storage systems are typically equipped with advanced battery technology, such as lithium-ion batteries. These batteries offer high energy density, long lifespan, and exceptional efficiency, making them well-suited for large-scale energy storage applications. 3. Integrated Systems

How are lithium battery shipments regulated?

Most lithium battery shipments also involve a road or rail leg, for example between factories, warehouses, ports, and airports. Road and rail movements are regulated regionally (ADR in Europe, 49CFR in the US, RID for rail, etc.). Always confirm local requirements. To stay compliant and avoid disruptions, follow these industry best practices:

Can a lithium battery be shipped if recalled?

Note: Damaged or recalled lithium batteries are prohibited for air transport. For ocean, acceptance is determined on a case-by-case basis. Shippers should contact their carrier or freight forwarder to confirm if special approvals and packaging can be arranged under IMDG Code provisions. How are lithium batteries classified for shipping?

Do lithium batteries need a shipper's Dangerous Goods Declaration?

In addition, a Shipper's Dangerous Goods Declaration (DGD) is generally required when shipping fully regulated lithium batteries, such as those not meeting exemption criteria. However, the need for a DGD depends on factors like battery type, quantity, and mode of transport - with air and ocean regulations differing significantly.

It is the global volume leader among Tier 1 lithium battery suppliers with plant capacity of 77 GWh (year-end 2019 data). Range of MWh: we offer 20, 30 and 40-foot container sizes to provide ...
