How do I ensure a mobile base station installation is EME compliant?

Compliance relies on the successful design of a mobile base station installation. The location of neighbouring areas of interest must be reviewed to ensure EME compliance can be achieved with proposed construction drawings. Environmental Management Reports(EMR's) are required for all mobile base station installations.

Should a base station be permanent or semi-permanent?

The requirement for a permanent base station setup increases as more receivers that use the base station as a source of corrections, increases the cost of any base station downtime. On the largest jobsites, and on those that remain operational for the longest time, a permanent or semi-permanent installation is a popular solution.

What is a base station in a mobile network?

The base stations represent the radio part of the mobile network, and one base station typically contains multiple cells which operate on specific radio frequencies. The radio network is what connects a mobile phone to the mobile network.

What is a GSM base station?

In the second generation of mobile networks powered by GSM technology, the base stations are called Base Transceiver Stations or BTS for short. The word transceiver refers to the fact that the base station is doing a dual job of being a transmitter and a receiver, hence the term trans + ceiver.

In accordance with the authority in DoD Directive 5124.02, this DTM: (1) Establishes policy for a consistent set of standards to characterize and manage the employment of the total military ...

For construction applications, where machine and site positioning operations using GNSS will be carried out over a long time (weeks, months, or ...

Service members within 11 months of separating who are stationed at a duty station where an accompanied

tour is authorized may be kept at that duty station until their ...

The radio base station is installed at a mobile operator's site, also known as a "cell site". The electricity powers it, and this power ...

This process is called a "handover" - literally where the network hands over the call from one base station to another, and it is undertaken seamlessly and without the caller being aware of the ...
