ZF is advancing its electric range extender systems, with production slated to commence in early 2026. These systems aim to alleviate range anxiety among electric vehicle ...

German tier 1 supplier ZF will introduce the next generation of its range extender technology for electric vehicles (EVs), with volume production beginning in 2026.

With an annual capacity of 60,000 battery modules, the new automated lithium battery production line integrates intelligent loading, high-speed laser welding technology, robotic stacking, and ...

The system features a new transmission with two integrated motors that can be paired flexibly with internal combustion engines across the Hyundai line-up, delivering a ...

The system features a new transmission with two integrated motors that can be paired flexibly with internal combustion engines across ...

German automotive supplier ZF has announced the development of next-generation range extender systems for electric ...

The Battery Electric Range Extenders segment held the largest market share in 2024, accounting for 55% of the global NEV range extender market. The growth of this ...

Many potential buyers of electric vehicles (EVs) still feel the so-called range anxiety that accompanies all-electric driving. In these cases, range extenders can be one solution. ZF ...

In these cases, range extenders can be one solution: A combustion generator that is coupled to an electric
