All information relates to Industrial nickel-cadmium batteries complying with IEC 62259 standard for partial gas recombination for use in floating stationary applications.

The nickel-cadmium battery is the most reliable battery system available in the market today. Its unique features enable it to be used in applications and environments untenable for other ...

This manual details the design and operating characteristics of the Saft Nife pocket plate block battery to enable a successful battery system to be achieved.

Up to this point, the batteries were "pocket type," constructed of nickel-plated steel pockets containing nickel and cadmium active materials. Around the ...

These batteries operate on the movement of lithium ions between anode and cathode, offering substantial cycle life and minimal maintenance requirements. Their adoption ...

Up to this point, the batteries were "pocket type," constructed of nickel-plated steel pockets containing nickel and cadmium active materials. Around the middle of the twentieth century, ...

Battery cell container material shall be translucent polypropylene. The battery shall be supplied wet and discharged, with all necessary intercell connectors, plastic covers and flame arrestor ...

The Battery works by an electrochemical reaction between a Nickel positive plate and a Cadmium negative plate, immersed in a liquid alkaline electrolyte (potassium ...

"Eveready" sealed nickel-cadmium cells can be recharged many times to give long useful life, and are not adversely affected by standing many months, either charged or discharged.

Saft operates the only plant in the world that produces nickel-cadmium batteries incorporating metals that have been reclaimed on site from spent batteries, reducing their eco-footprint.

Simply complete this form which will be delivered to our team of experts who will help with your inquiry. Please provide as much information as possible so we can respond efficiently.
