Australia is not rolling out clean energy projects nearly fast enough to reach the Australian government's target of 82% renewable electricity by 2030. A huge build of solar and wind ...

Installing a small-scale renewable energy system may qualify households and small businesses for a credit towards the purchase price. The SRES applies to five small-scale renewable ...

Systems that have a capacity increased to more than 100 kW may be eligible to apply for accreditation as a power station. Find out ...

Systems that have a capacity increased to more than 100 kW may be eligible to apply for accreditation as a power station. Find out more about upgrading a small-scale ...

In 2023, small-scale solar (systems up to 100 kW) was responsible for 28.5 per cent of Australia's clean energy generation and produced 11.2 per ...

For each postcode, local government area, and state electorate, the map shows the estimated percentage of houses that have a PV system and the total photovoltaic capacity installed.

*Projected. Small-scale solar refers to systems less than 100 kilowatts. Totals may not sum due to rounding.

As Australia's electricity system continues to evolve, we're providing funding to support innovation to enable the ultra low cost renewable generation required for the viability of future industries ...

In 2023, small-scale solar (systems up to 100 kW) was responsible for 28.5 per cent of Australia's clean energy generation and produced 11.2 per cent of the country's total electricity.

It provides incentives to households and businesses to install small-scale renewable energy systems like rooftop solar, solar batteries, solar water heaters and air ...

Small-scale systems in Australia are known as small renewable energy systems, like rooftop solar panels, solar water heaters, small wind turbines and air source heat pumps ...

Find out more about the Small-scale Renewable Energy Scheme. Households and small businesses that install a small-scale renewable energy system (solar, wind or hydro), or ...
