Few studies have optimized global deployment of photovoltaic and wind power. Here we present a strategy involving construction of 22,821 photovoltaic, onshore-wind, and ...

The rise in clean energy supplies came despite year-over-year drops in wind and hydro power production, which were offset by ...

Wind and solar power capacities jointly represented 56% of France's renewable power capacity. Wind power alone represented one-third of total renewable electricity production and 8.3% of ...

The rise in clean energy supplies came despite year-over-year drops in wind and hydro power production, which were offset by record solar generation and the highest nuclear ...

With a rapidly growing population and changing consumption habits, the Paris Region in France is a great environment for renewable energy companies.

Find here the data on electricity generation in France, presented either in aggregate or in detail by generation type: nuclear, conventional thermal, hydro, solar, wind and renewable thermal.
