How much does energy storage cost in New York?

It will cost New York up to \$2 billion to add 6 GW of energy storage by 2030, up from the previous high-end estimate of \$1.7 billion, according to updated cost estimates released March 15 by the New York State Department of Public Service and the New York State Energy Research and Development Authority, or NYSERDA.

What is New York state's energy storage plan?

New York State aims to reach 1,500 MW of energy storage by 2025 and 6,000 MW by 2030. Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers.

How many GW of energy storage will New York State have?

The updated roadmap calls for 3 GW of bulk energy storage to be deployed in New York State through 2030. Estimates for the roadmap's 1.5 GW retail storage component also increased, from \$438 million in 2022 net present value to \$488.5 billion in 2024 net present value.

Are energy storage projects safe in New York State?

New York State has some of the most rigorous safety standards for energy storage projects in the country, reinforced by independent nationally recognized experts to ensure full compliance.

In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are ...

Administered by NYSERDA under its Bulk Energy Storage Program, this RFP is the first of three planned solicitations. It seeks to support various storage technologies and ...
