-----

The project is the first to explore the potential of utilizing ATES for district heating network applications in Austria and Central Europe. The results of the project can be used to set the ...

The Vienna ATES project aims to identify and characterise available aquifer resources for integration into the Austrian district heating sector as well as providing assessment tools to ...

The ATES Vienna project heating networks with the aim of designing the first pilot ATES project in Austria. In addition, an identification and characterization of existing resources, their economic ...

Vienna's commitment to climate neutrality by 2040 has fueled investments in innovative photovoltaic energy storage projects. With rising solar adoption and fluctuating energy ...

Containerized energy storage solutions now account for approximately 45% of all new commercial and industrial storage deployments worldwide. North America leads with 42% market share, ...

The project investigates the integration of aquifer thermal storage systems into district heating networks. The aim is to design the first technical pilot plant in Austria.

The project investigates the integration of aquifer thermal storage systems into district heating networks. The aim is to design the first technical pilot ...

With EUR17.3 million from the Innovation Fund, ScaleUp will construct a 20 MW underground thermal energy storage system in Vienna, storing excess summer heat for use in winter.

PDS Timeframe Investment programme description ELENA PDS will be used by Wien Energie to prepare

and implement investments for a seasonal heat energy storage system, in ...

A study 1 carried out by the University of Applied Sciences Technikum Wien, AEE INTEC, BEST and ENFOS presents the market development of energy storage technologies ...

Imagine storing energy as simply as filling a balloon with air--sounds almost too easy, right? That's essentially what Vienna's compressed air energy storage (CAES) project ...
