Ranking nations based on their renewable energy adoption provides a crucial metric for understanding global progress towards sustainable energy systems. This involves ...

In this interactive chart, we see the share of primary energy consumption that came from renewable technologies - the combination of hydropower, solar, wind, geothermal, wave, tidal, ...

One thing all of this shows is there are many ways to grow a renewable energy grid, and different countries can lean on wind or solar to different extents in order to retire fossil ...

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and ...

In certain regions, wind power might account for a greater share of renewable energy production than solar energy, particularly in areas with consistent wind patterns.

Global renewable energy capacity grew by a record-breaking 15.1% in 2024 to reach 4,448 gigawatts (GW). Around the world, an additional 585 GW of power was added, ...

As the world transitions away from fossil fuels to renewable energy, there is a pressing need to develop energy storage assets that can provide power when the sun is not ...

In 2023, renewables surpassed coal in energy generation. 1 Wind and solar are the fastest growing renewable sources, but contribute less than 3% of total energy used in the U.S. 1 The ...
